(a) Up to and including 1958 average rainfall for each year (represented by 100) is the average over the period 1911–1942. As from 1st January, 1959 a long period average from a selection of representative stations is used.

SEASONAL CONDITIONS, TASMANIA: SEPTEMBER, 1965

Rainfall: Although the greater part of the State recorded rainfall totals near normal or above during September, 1965, a large area of the inland East Coast, the Southeast and Midlands registered falls of only 50 to 80 per cent of normal. The coastal fringe of the East Coast recorded good totals and in many places they were 30 per cent above average. By contrast, falls on the West Coast were below normal, from the northwest tip to Cape Sorell.

Temperatures: Mean temperatures for the month were well above normal in all areas of the State, the greater part by more than one degree. In the habited areas, the only sections to record less than one degree above average were the highland areas of the west and northwest coasts, parts of the Central Plateau and a section of the Midlands.

Rural Conditions: Despite the low rainfall in some areas, all pastures were in good condition and lush growth was evident in all areas, with the possible exception of the Derwent Valley. Good follow-up rains were needed however to promote and continue the growth. The lambing season was proving to be one of the best on record and compared favourably with the good season of the previous year. Fairly favourable weather and plentiful food contributed to high lambing percentages and losses of ewes were reported to be very light. Stock generally were reported as being in good condition.
